

# Rolled-Ribbon® Cell Construction

Positive pan terminal ▶

◀ Electrode roll

Negative pan terminal ▶

◀ Cross-section

**Continuous contact between the edge of the current collectors and the cell terminals –**

lowers impedance, lowers thermal resistance, vastly improves thermal exchange

**Solid internal cell structure –** better suited to handle shock and vibration

**Hard case construction –** rugged and durable, does not require additional protective hardware

 **Rolled-Ribbon**
